With a proliferation of equipment manufacturers and technology silos, it can be tough for O&M teams to proactively manage disparate portfolios of wind, solar, and battery storage assets. Effective asset management requires timely, consistent reporting and analysis so teams can focus on making system improvements rather than sifting through endless data. Nispera standardizes reporting and provides greater system transparency into your portfolio.

Contractual Availability

Calculate and report contractual availability figures or asset performance ratios based on your specific O&M agreements to better evaluate asset performance and obligations.

Ticketing

Integrated ticketing supports task management across your entire portfolio. Create and assign tasks within your organization - with information on asset, components, status, type, assignee, etc. – for more transparent ticketing and issue resolution.

"Thanks to Nispera, I have always at hand all of the tools and data to analyze my portfolio and demand a better service from my O&M providers."

MARCO VEDASCHI Senior Engineering Manager at Susi Partners
