

FLUENCE NISPERA™

Portfolio Management

View portfolio-wide key performance indicators in dashboards and executive reports, including operational expenditures, year-to-date energy production, and more

Companies that own and operate large-scale renewable assets know that access to timely, accurate information about a portfolio's performance is essential for maintenance planning, reporting and more. Nispera creates a single source of truth for data from individual assets and portfolios across solar, wind, hydro, and energy storage from any technology provider. Nispera scales with you as your team and portfolio expands so you can focus on what matters most – safe, efficient asset operation.

Executive Reporting

Asset managers and asset owners often spend countless hours harmonizing analyses and findings to meet the needs of various stakeholders. Nispera's executive reports provide an overview of the technical and commercial performance of a diversified asset portfolio, tailored to the needs of the company's executives or stakeholders.

Executive Dashboard

Nispera's interactive dashboards are tailored towards different audiences – with the ability to provide a high-level overview and drill down into daily, monthly, and yearly performance trends. These analyses can be fine-tuned to the types of assets, location, technologies, desired time frame, and other needs with just a few clicks

“Nispera meets and exceeds our needs in terms of efficient monitoring, validation of data and variety of analysis for our whole renewable portfolio that ensures an executive overview as well as a deep dive into single asset trouble shooting.”
